The Art of Radiography at SMCC

About the Radiography Department

The Radiography Program at Southern Maine Community College has been educating and training students for American Registry of Radiologic Technologists Board Certification and employment since the early 1980s.

The Project

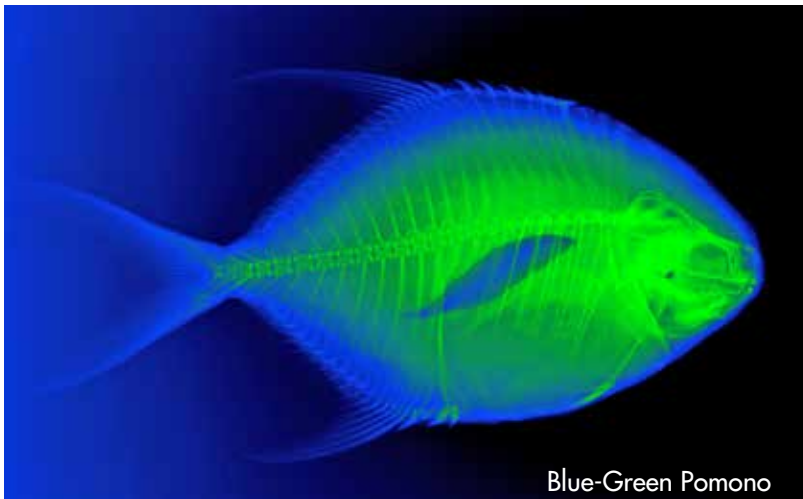

The program launched its radiographic print project in 2011. The project provides learning opportunities for students to enhance their understanding of X-ray processes and digital imaging. It also allows us to raise funds through the sale of radiographic images transformed into beautiful photographs.

Learning Opportunity

The project has been so successful that senior students now produce these radiographic images as a course assignment on an annual basis. With the renovation of the program's radiography lab, we continue to produce and sell these artistic X-ray photographs to raise money for scholarships and to support learning opportunities for students.

Quality Photographs

These inkjet images are printed on a high-quality printer with light-fast pigment inks. They are printed on museum-quality rag paper and packaged in an archival sleeve against acid-free foam boards. New prints are added each year, so check back in the future for more selections.
